

About Me – Senior Test Engineer (Manual QA / Test Analyst)

I am a Senior Test Engineer and ISTQB Certified Test Analyst with over 4+ years of experience in Manual Testing of Web Applications, with strong domain experience in E-commerce.

My professional experience includes close collaboration and client interactions, understanding business requirements, identifying critical integration touch points across systems, and ensuring end-to-end quality of application workflows.

I have extensive hands-on experience in defect identification and reporting, designing comprehensive test plans, and authoring high-quality test cases that cover positive, negative, and edge scenarios. I focus on building reliable regression suites and validating integrations across modules such as Login, Search, Cart, Checkout, and Order Management.

My core strengths include requirement analysis, test strategy and planning, functional, regression, and integration testing, and driving quality in Agile environments following STLC and SDLC best practices.

This portfolio showcases sample projects in the E-commerce and Healthcare domains, created to demonstrate my testing approach, documentation quality, and overall QA expertise using non-confidential demo applications.
